

LIGHT-DIRECTED INVENTORY

Pick-to-light. Put-to-light.

Inventory that lights the way.

LytGuide turns each inventory task into one clear instruction at the rack:
the color shows the action and the digit shows the quantity.

● **GREEN: PICK 8**

● **RED: PUT 6**

THE INVENTORY KNOWLEDGE GAP

Problem Statement

People may know which product they need, but not the aisle, rack or cell where it should be picked from or put away. They must search the warehouse or depend on someone who already knows the layout.

01

Knowledge stays with experienced staff

Other employees must ask for directions or search the racks themselves.

02

The pick location is unclear

A requester may know the product but not its exact aisle, rack and cell.

03

The put location is unclear

Incoming or returned items may be placed in an unsuitable or incorrect cell.

04

The screen and rack are disconnected

The person must remember the location and quantity while moving through the warehouse.

WHAT HAPPENS WITHOUT PHYSICAL GUIDANCE

1

A salesperson needs a product

2

They open the inventory screen

3

They know what - but not where

4

They ask someone or search the racks

5

They return to complete the movement

THE CORE PROBLEM

Inventory is recorded in software, but finding the physical item still depends on memory, searching or another person.

LIGHT-DIRECTED PICK AND PUT

Solution

LytGuide turns a product request into a guided warehouse journey: select the item, go to the exact aisle and cell, follow the LED quantity, then return to the station and complete the movement.

01

Request the product

A salesperson or staff member selects the product and quantity.

02

Go to the exact location

LytGuide identifies the aisle, rack and storage cell.

03

Follow the light and digit

Green means pick, red means put, and the digit shows the quantity.

04

Complete the movement

Return to the station, confirm the work and update inventory history.

CONCEPT VISUALIZATION - MODULES RETROFIT TO THE RACK

SELECT THE PRODUCT > GO TO THE AISLE AND CELL > FOLLOW THE LED > COMPLETE ON SCREEN

A SIMPLER MOVEMENT CREATES BETTER INFORMATION

Make the work clearer. Make the record more useful.

LytGuide reduces the staff member's decision load while turning each confirmed movement into dependable inventory history.

01 Simpler execution

The staff member follows a color and quantity at the exact cell.

02 Consistent placement

Put plans use stock and capacity rules instead of warehouse guesswork.

03 Trustworthy movement history

Confirmed picks, puts and corrections remain traceable.

04 Actionable oversight

Reports and recommendations reveal what moved and what needs attention.

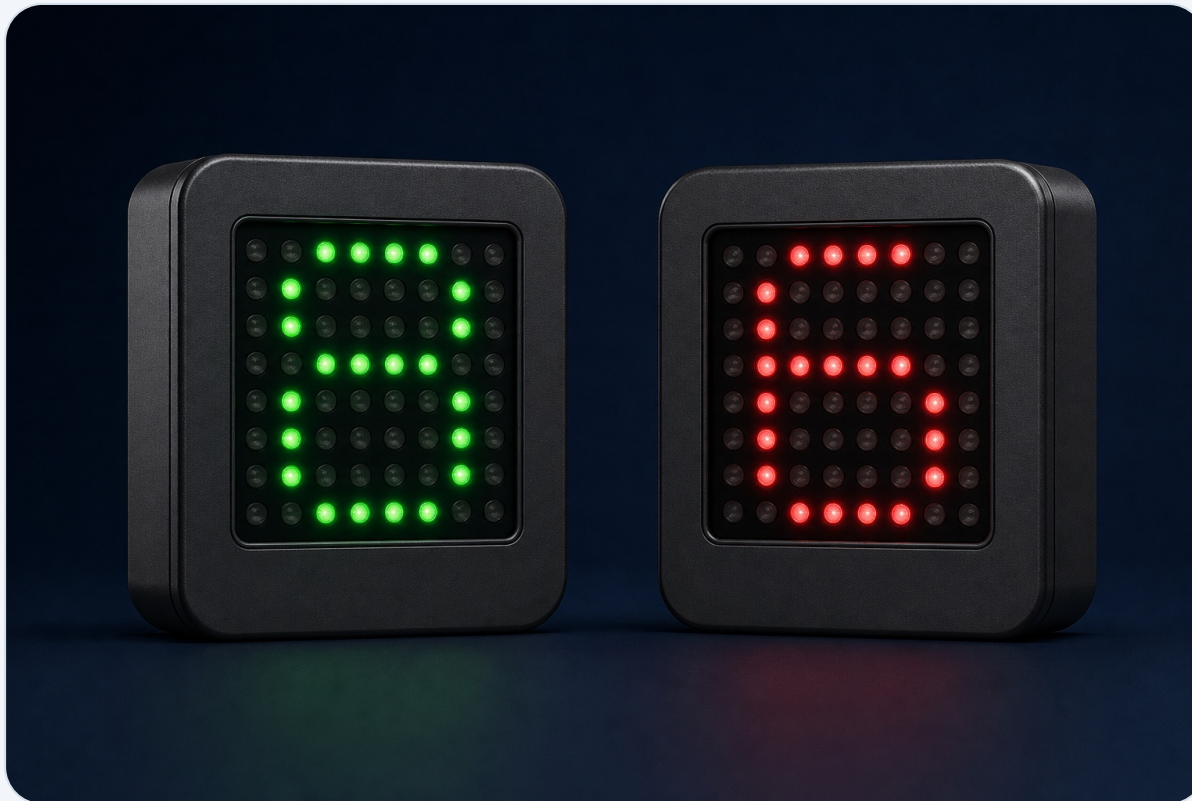

THE OPERATIONAL RESULT

Clearer instructions at the rack, controlled inventory decisions, and one connected source of movement data.

FABRICATED FOR THE RACK CELL

Color tells the action. The digit tells the quantity.

A compact 8x8 RGB LED matrix can present a clear quantity in the same place the staff member performs the work.

CONCEPT VISUALIZATION - FINAL ENCLOSURE AND MOUNTING MAY EVOLVE

01

Green means PICK

Remove the displayed quantity from this cell.

02

Red means PUT

Place the displayed quantity into this cell.

03

One clear display

64 addressable RGB points form a readable digit at the point of work.

FABRICATED TO FIT THE RACKS YOU ALREADY USE

GREEN LIGHT GUIDANCE

Pick-to-light: right cell, right quantity.

LytGuide plans the pick, lights the exact stock locations in green, and shows the quantity to remove at each cell.

01 Create

Choose the product and the quantity required.

02 Plan

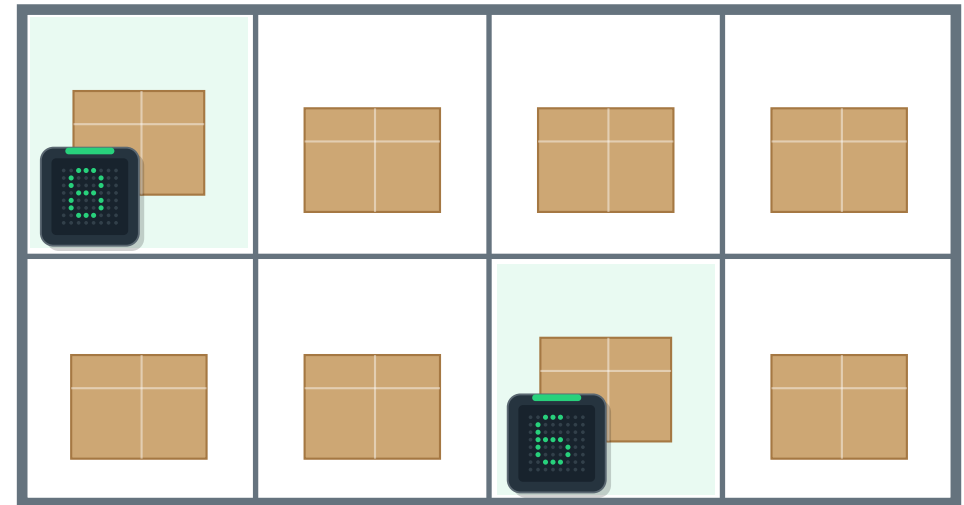

LytGuide selects the stock cells that can fulfil the task.

03 Follow the green light

Each active module shows the quantity to remove.

04 Confirm

Review the actual movement and update stock history.

ONE TASK | TWO GREEN CELLS | $8 + 6 = 14$ UNITS

What the staff member needs to know

Where to go. How many to pick. Nothing more is needed at the rack.

RED LIGHT GUIDANCE

Put-to-light: right space, right quantity.

LytGuide checks stock and capacity, lights the best destination cells in red, and shows the quantity to place at each one.

01 Create

Choose the incoming product and quantity.

02 Plan

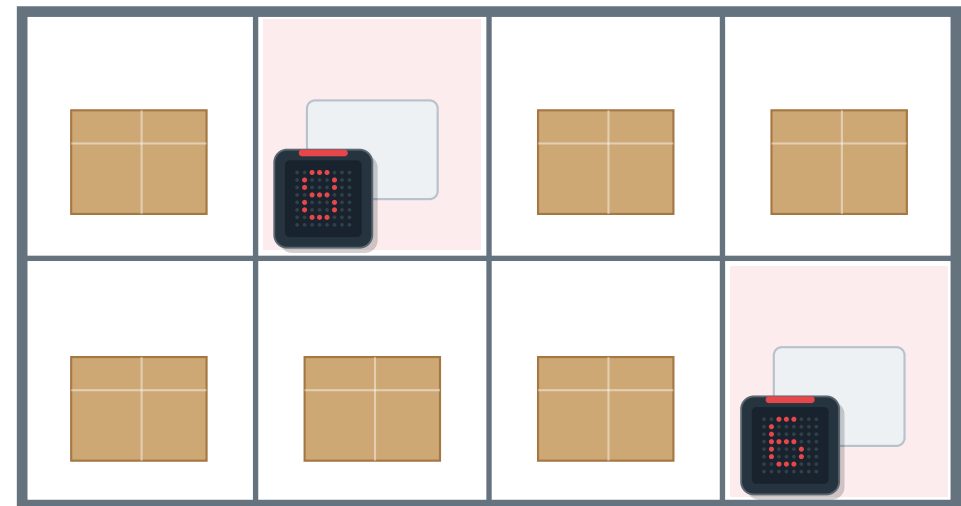

LytGuide uses stock and capacity to select suitable cells.

03 Follow the red light

Each active module shows the quantity to place.

04 Confirm

Review the placement and make the stock available to pick.

ONE TASK | TWO RED CELLS | $8 + 6 = 14$ UNITS

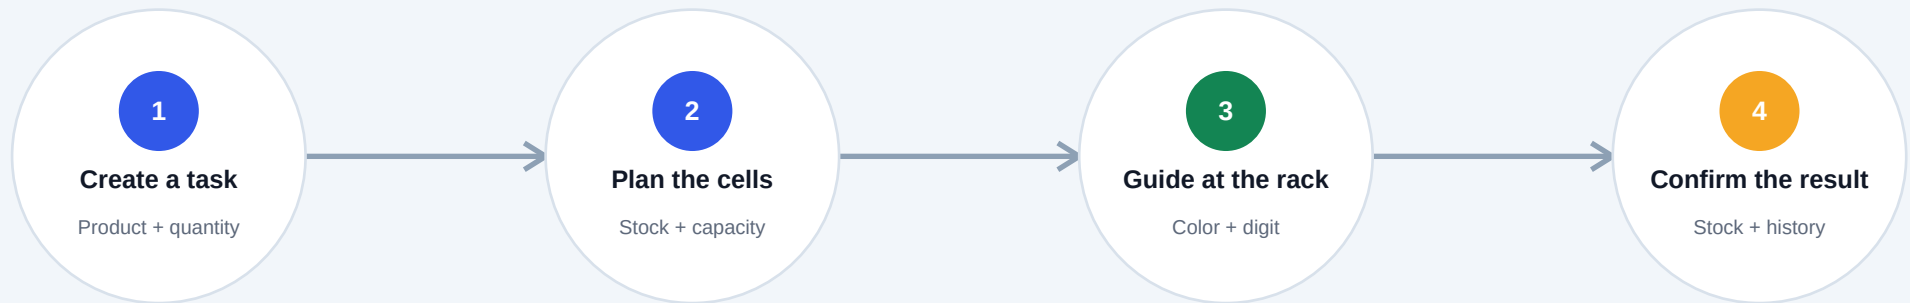

Space used intelligently

LytGuide can refill suitable cells first and split larger quantities when one location is not enough.

FROM TASK TO INVENTORY INSIGHT

One system from task creation to reporting.

LytGuide connects planning, rack guidance, confirmation, stock visibility, recommendations and reporting.

CONFIRMED MOVEMENTS KEEP THE NEXT PLAN GROUNDED IN REAL STOCK

Stock visibility

Know what is available by product and by exact location.

Recommended actions

Turn mixed or over-capacity cells into an editable light-guided cleanup plan.

Movement reporting

See demand, stock changes, team throughput, exceptions and adjustments.

THE RECORD STAYS USEFUL

Find stock from either direction. Correct it with control.

Browse by product or location, edit cell capacity, reconcile physical counts and preserve an auditable movement history.

START WITH A PRODUCT

Safety Gloves

Available: 8 pairs | Capacity: 3 per location

Z1-R1-C01 3 pairs

Z1-R1-C02 3 pairs

Z1-R1-C03 2 pairs

START WITH A LOCATION

Z1-R1-C04

Controller B1 | LED module 04 | Mapped

Safety Gloves 6 units
SKU-TEE-002

Actions: Pick | Put | Locate | Show quantity

Editable capacity

Set the preferred quantity per cell; the next put plan uses the new rule.

Count reconciliation

Compare the saved quantity with the physical count and record the reason.

Controlled correction

Authorized corrections add a traceable adjustment instead of erasing history.

Role-based access

Give staff, admins and owners the controls appropriate to their work.

CONTROL BEYOND THE RACK

See the operation. Trust the record. Stay ready.

LytGuide gives supervisors and administrators the visibility and safeguards needed around daily light-guided work.

01 See what is moving

- Pick and put movement reports
- Current stock snapshot
- Time ranges, trends and print-ready reports

02 Keep records trustworthy

- Count reconciliation
- Traceable task corrections
- Team activity and exception review

03 Protect the operation

- Automatic and manual backups
- Protected restore workflow
- Controller, mapping and system health checks

SIMPLE FOR STAFF. VISIBLE TO MANAGEMENT.

Roles and permissions keep each person focused on the decisions they are responsible for.

WHERE LYTGUIDE FITS

Built for repeatable rack-based inventory work.

LytGuide is a strong fit where teams repeatedly pick and put stock from fixed locations and need a clear, traceable workflow.

01 Warehousing and distribution

Guide carton, case, bin and unit movement across mapped storage cells.

02 E-commerce and 3PL

Support frequent fulfilment picks and replenishment puts in compact rack areas.

03 Manufacturing stores

Direct components, consumables and line-side replenishment from local stores.

04 Retail backrooms and dark stores

Guide restocking and order fulfilment without replacing the existing rack layout.

05 Service parts and maintenance

Keep issue, return and placement of spare parts visible and traceable.

06 Defence and institutional stores

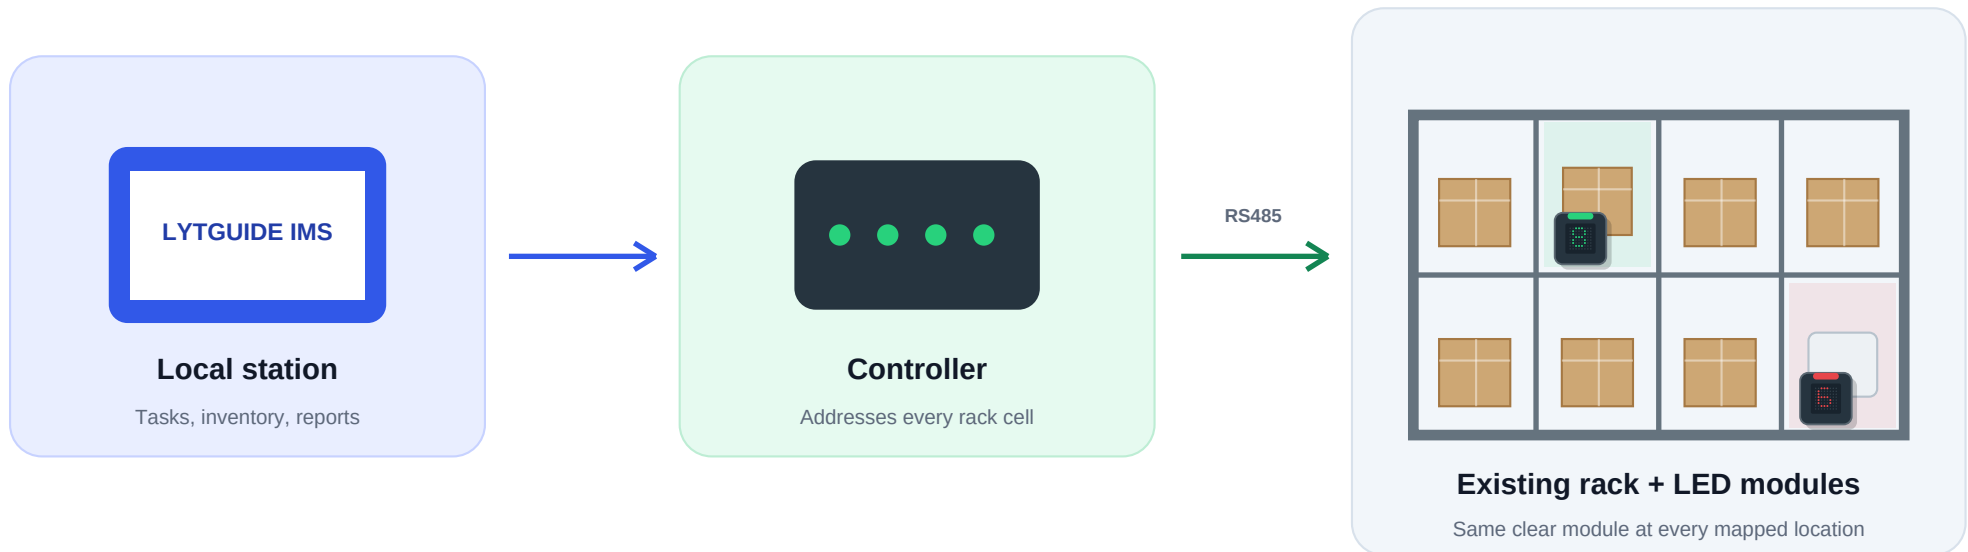

Support local, high-accountability inventory work with controlled roles and records.

FIXED CELLS | REPEATED MOVEMENTS | GUIDED STAFF | CLEAR LOCAL WORKFLOW

RETROFIT AND SCALE

Retrofit the rack. Scale at your pace.

A local station plans the work, a controller sends the rack signals, and compact LED modules identify each exact storage cell.

Retrofit first

Keep the existing rack and logical location layout.

Local by design

Core pick, put and confirmation workflows run on-site.

Scale rack by rack

Add controllers and mapped cells as the operation grows.

Manual fallback

If light hardware is degraded, screen guidance keeps work available.

CONTACT AND NEXT STEP

Bring guided PICK and PUT to one rack.

Prove the workflow with your products, your locations and your team. Expand when the operation is ready.

CONCEPT VISUALIZATION

01

Discover

Map products, roles and rack locations.

02

Pilot

Fabricate modules and commission one rack.

03

Adopt

Train staff on green PICK and red PUT.

04

Scale

Extend controllers, cells and reporting.
