

LytGuide Deployment Quotation

Smart Inventory Management System | One Warehouse LED-Guided Deployment | Bathinda, Punjab

Project name	LytGuide
Prepared for	Army warehouse unit, Bathinda, Punjab
Quote date	09 June 2026
Deployment model	Local Raspberry Pi kiosk with RS485 LED module guidance

Quoted project value

Total implementation price for LytGuide is INR 6,50,000 inclusive of GST for one local warehouse pilot deployment. Hardware material, cell fabrication, wiring, enclosures, controller boxes, Raspberry Pi peripherals, and replacement parts are quoted separately.

Commercial Summary

Taxable project value	INR 550,847
GST @ 18%	INR 99,153
Total quoted amount	INR 650,000
Hardware/material/fabrication	Quoted separately

Scope Included

- LytGuide local Smart IMS application for one warehouse, intended for approximately 45-50 cells and 2 controllers.
- Core inventory software covering users, products, storage locations, stock balances, pick/put tasks, audit transactions, corrections, and recommended actions.
- LED-guided inventory operation using RS485-connected ESP32 controller modules and 8x8 matrix LED modules.
- Reporting refinement with stock, movement, activity, exception, and print-ready reports.
- Admin controls for registration keys, user access, backups, restore flow, system health, controller setup, and cell mapping.
- Raspberry Pi local deployment, configuration, commissioning, basic operator/admin training, and initial support.

Price Breakup

No.	Component	Amount excl. GST	Amount incl. GST
1	Requirement study, IMS workflow planning, documentation	INR 25,424	INR 30,000
2	Core IMS software: login, users, products, locations, inventory database	INR 110,169	INR 130,000
3	Pick/Put workflows, LED-guided tasks, final review, audit trail, corrections	INR 80,508	INR 95,000
4	Admin/configuration: users, registration keys, backups, recovery, system health	INR 38,136	INR 45,000
5	Reporting refinement and print-ready reports	INR 33,898	INR 40,000
6	RS485 + LED hardware integration software	INR 93,220	INR 110,000
7	ESP32 firmware integration, controller setup, mapping, test/locate/ping	INR 63,559	INR 75,000
8	Raspberry Pi packaging, local kiosk/app deployment	INR 29,661	INR 35,000
9	On-site commissioning, configuration, testing, training	INR 50,847	INR 60,000
10	Initial support/warranty buffer	INR 25,425	INR 30,000
Total		INR 550,847	INR 650,000

Exclusions and Separately Quoted Items

- LED matrix modules per cell, ESP32 controllers, controller boxes, power supplies, buck converters, wiring, connectors, enclosures, and fabrication material.
- Raspberry Pi, display, keyboard/mouse, printer, storage media, and other purchased peripherals.
- Travel, stay, local transport, and site-specific logistics, if significant.
- Barcode/QR scanning, ERP/accounting integration, mobile app, remote access, multi-warehouse synchronization, and physical push-button confirmation.
- Source-code ownership or exclusive IP transfer. The quoted price covers deployment and usage for one warehouse only.

Support and Warranty Terms

- Includes 30 days of initial software support and stabilization after commissioning.
- Bug fixes within agreed scope are included during the 30-day support period.
- New features, report format changes beyond agreed scope, and integrations are change requests.
- Replacement parts and failures caused by physical damage, power issues, wiring damage, water/dust ingress, or misuse are charged separately.
- Annual maintenance after the initial support period can be quoted separately.

Assumptions

- System is for local warehouse use only and does not require internet/cloud operation.
- The first deployment is a pilot/first-unit implementation for one Army warehouse.
- The final hardware material and fabrication estimate will be prepared after confirming final cell count, controller count, mounting method, and wiring route.
- GST treatment and invoice format should be confirmed with a CA before final billing.

Acceptance

The project will be considered commissioned when the local app is installed, configured for the agreed cells/controllers, LED guidance is tested for mapped modules, reports are available, and basic training is completed.
